

Business Plan and Convener's Report

ISO/IEC/JTC 1/SC 22/WG 23
(Programming Language Vulnerabilities)

Document: ISO/IEC JTC 1/SC 22/WG 23/N0659

Date: 2016-05-18

PERIOD COVERED: July 2015 – July 2016

SUBMITTED BY:

Convener, ISO/IEC JTC 1/SC 22/WG 23: Vulnerabilities
Stephen Michell

1. MANAGEMENT SUMMARY

1.1. MAIN PROJECT

JTC 1/SC 22/WG 23 TR 24772 Guidance to Avoiding Vulnerabilities in Programming Languages through Language Selection and Use

1.2. PROJECT REPORT

1.2.1. COMPLETED PROJECTS

ISO/IEC TR 24772:2013, *Guidance to Avoiding Vulnerabilities in Programming Languages through Language Selection*. This is a Technical Report.

1.2.2. PROJECTS UNDERWAY

JTC 1 24772-1, *Guidance to Avoiding Vulnerabilities in Programming Languages*. This is the update of TR24772:2013 for language independent vulnerabilities, following the project split of project 22.24772.

JTC 1 24772-2, *Guidance to Avoiding Vulnerabilities in Programming Languages – Part 2, Vulnerability descriptions for programming language Ada*. This is the update of

TR24772:2013 Annex C for language specific vulnerabilities for Ada, following the project split of project 22.24772.

JTC 1 24772-3, *Guidance to Avoiding Vulnerabilities in Programming Languages – Part 3, Vulnerability descriptions for programming language C*. This is the update of TR24772:2013 Annex D for language specific vulnerabilities for C, following the project split of project 22.24772.

JTC 1 24772-4, *Guidance to Avoiding Vulnerabilities in Programming Languages – Part 4, Vulnerability descriptions for programming language Python*. This is the update of TR24772:2013 Annex E for language specific vulnerabilities for Python, following the project split of project 22.24772.

JTC 1 24772-8, *Guidance to Avoiding Vulnerabilities in Programming Languages – Part 8, Vulnerability descriptions for programming language Fortran*. This is a new Part for language specific vulnerabilities for Fortran.

JTC 1 17960, *Code Signing for Source Code*. This project is to produce an International Standard, and has been published.

1.2.3. CANCELLED PROJECTS

None over this time period.

1.2.4. COOPERATION and COMPETITION

Where appropriate, WG 23 has established active liaisons with other SC22 working groups, other JTC 1 subcommittee working groups (such as SC 27/WG 3 and SC 7 WG19) and other standards organizations, such as Ecma International. See the table in 2.3 for a list of liaisons.

There is no apparent direct competition with any other current SC22 working group or JTC 1 subcommittee.

2. PERIOD REVIEW

2.1. MARKET REQUIREMENTS

WG 23 is responding to the needs of the programming language community by inclusion. WG 23 will accept input and liaison by any and all appropriate organizations.

The marketplace demands robust, secure software. Vulnerabilities are the antithesis of robust, secure software. Many of the attacks on software-based systems succeed because the computer language used did not prevent the attack vector, and did not warn the developer that the code being produced contained flaws that could be used to generate attacks.

WG 23 has produced 2 editions of TR 24772, but there are vulnerabilities that still need to be identified, and programming languages that still need to be documented with regards to

vulnerabilities.

2.2. ACHIEVEMENTS

WG 23 has published the second edition of TR 24772, and started work on the third edition, after splitting the project and the TR into Part 1, language independent part, and Parts 2 through 8 for language-specific vulnerability descriptions. Work on the Parts for Ada, C, Python, and Fortran are currently underway. The other parts will follow as resources are available.

2.3. RESOURCES

Seven national bodies have participated in the WG 23 meetings this year: Canada, China, Italy, Japan, Korea, Spain, UK, and the USA, as well as several liaisons.

Over the last several years WG 23 has made Web conferencing capabilities available for those that are finding it difficult to travel. WG 23 would like to thank ISO for the Web conferencing support.

Liaison with five SC22 language groups, and four groups outside of SC22 have been established. Liaisons fill a valuable role in that they identify the vulnerabilities that exist (and do not exist) in their language, produce the primary documentation of those vulnerabilities and turn them into the relevant language-dependent part in conjunction with the core team through the liaison individual.

Current WG 23 liaisons are:

Group	Name/Type	Person assigned
SC 22/WG4	Cobol	Robert Karlin, Chris Tandy
SC 22/WG5	Fortran	Dan Nagle
SC 22/WG9	Ada	Erhard Ploedereder
SC 22/ WG14	C	Clive Pygott
SC 22/ WG 21	C++	Group
SC 7/WG 19	Open Distributed Processing and Modeling Languages	Cesar Gonzalez- Perez

SC 27/WG 3		Security evaluation, testing and specification	Nomination Pending
ECMA TC39/TG2		C#	Nomination pending
JSR-282/JSR-302		Real-Time/Safety-Critical-Java	Ben Brosgol
Linux Foundation		Linux	Nick Stoughton
MDC		MUMPS	Ed de Moel

3. FOCUS NEXT WORK PERIOD

3.1. DELIVERABLES

None for this time period.

3.2. STRATEGIES

WG 23 decided in 2015 that a core document and seven language-specific annexes, with at least two or three more in planning, creates a maintenance burden that makes it difficult to keep all portions of the document up to date in a single document.

WG 23 therefore decided to split TR 24772 into a series of parts, as follows (see also clause 4.1 for the official request for SC 22 action):

- TR24772-1 Information Technology — Programming languages — Guidance to avoiding vulnerabilities in programming languages through language selection and use – Language Independent View
- TR24772-2 Information Technology — Programming languages — Guidance to avoiding vulnerabilities in programming languages through language selection and use – Programming Language Ada
- TR24772-3 Information Technology — Programming languages — Guidance to avoiding vulnerabilities in programming languages through language selection and use – Programming Language C
- TR24772-4 Information Technology — Programming languages — Guidance to avoiding vulnerabilities in programming languages through language selection and use – Programming Language Python

- TR24772-5 Information Technology — Programming languages — Guidance to avoiding vulnerabilities in programming languages through language selection and use – Programming Language Ruby
- TR24772-6 Information Technology — Programming languages — Guidance to avoiding vulnerabilities in programming languages through language selection and use – Programming Language Spark
- TR24772-7 Information Technology — Programming languages — Guidance to avoiding vulnerabilities in programming languages through language selection and use – Programming Language PHP
- TR24772-8 Information Technology — Programming languages — Guidance to avoiding vulnerabilities in programming languages through language selection and use – Programming Language Fortran
- TR24772-9 Information Technology — Programming languages — Guidance to avoiding vulnerabilities in programming languages through language selection and use – Programming Language COBOL

At the 2015 SC 22 plenary, projects for TR24772-1, 2, 3, 4 and 8 were initiated.

3.3. RISKS

The loss of the previous convenor/editor created a significant loss of expertise and resource for the group, as the remaining members are volunteers instead of funded to do the work. WG 23 has responded by separating the role of convenor and editor for TR 24772, and will assigned different editors to each language-specific part as maintenance to it is initiated.

3.4. OPPORTUNITIES

No special opportunities are known yet.

3.5. WORK PROGRAM PRIORITIES

See 4.1.

4. OTHER ITEMS

4.1. POSSIBLE ACTION REQUESTS AT FORTHCOMING 2016 PLENARY

Upon examination of the ISO eCommittee web site, it appears that all of the WG 23 projects (24772-1 through 9) have been registered with a completion date of 2018-09-20. At the 2015 plenary, it was agreed to register 24772-1, -2, -3, -4 and -8 as active projects.

It is our understanding that projects cannot be extended once commenced, so SC 22 may need to suspend TR 24772-5, -6, -7 and -9.

4.2. PROJECT EDITOR

The following individuals have been appointed project editors and backup project editors:

- JTC 1 NP 24772-1, Guidance to Avoiding Vulnerabilities in Programming Languages through Language Selection. □(Project Editor Larry Wagoner, backup Project Editor Clive Pygott)
- JTC 1 NP 17960, Code Signing for Source Code. □Larry Wagoner (Project Editor), backup Project Editor vacant

4.3. ELECTRONIC DOCUMENT DISTRIBUTION

WG 23 has conducted some of its detailed technical discussion using the email reflector maintained by Keld Simonsen. WG 23 also has an ftp and Web site at <http://open-std.org/sc22/wg23>. WG 23 is providing all the appropriate committee documents on the Committee Web site, eliminating the need for paper mailings.

4.4. RECENT MEETINGS

No	Date	Place	Host
29	20 Oct 2014	Teleconference	ISO
30	10 Nov 2014	Teleconference	ISO
31	26-27 Jan 2015	Kemah, Tx, USA	Maurya Software Inc
32	26 Feb 2015	Teleconference	ISO
33	30 March 2015	Teleconference	ISO
34	27 April 2015	Teleconference (cancelled)	ISO
35	<u>25 May 2015</u>	Teleconference	ISO
36	26-27 Jun 2015	Madrid, Spain	Ada Europe
37	3 Aug 2015	Teleconference	ISO

38	17-18 Sep 2015	Washington, DC	INCITS
39	27 Oct 2015	Teleconference	ISO
40	23 Nov 2015	Teleconference	ISO
41	11-12 Jan 2016	Orlando, FL, USA	US NB
42	8 Feb 2016	Teleconference	ISO
43	7 Mar 2016	Teleconference	ISO
44	15-16 Apr 2016	London, UK	BSI
45	14-15 Jun 2016	Pisa, Italy with pre-meeting teleconference 18 May 2016	Ada Europe

4.5. FUTURE MEETINGS

#46 Vienna, Austria 15-16 September 2016

#47 Ft. Lauderdale, FL 23-24 January 2017

#48 Toronto, Canada 6-7 April 2017

#49 TBD, with Ada Europe TBD June 2017

#50 London, UK 17-18 August 2017

WG 23 is conducting monthly teleconferences in conjunction with the four face-to-face meetings annually, but are treating the teleconferences as pre-meeting teleconferences to organize material for the meetings.
