Notes

The convener, John Benito, started the telecon shortly after 12:00 noon ET. Others attending the telecon were: Jim Moore, Bob Karlin, Dan Nagle, Larry Wagoner, Clive Pygott, and Tom Plum.

The convener called the group's attention to N0218, contributed by J-P Rosen of WG9. He suggested that it contained good ideas and will lead to fruitful discussion at the October meeting. He urged everyone to read it.

We began reviewing the Dan Nagle's most recent draft of an annex for Fortran, N0220. Dan kept detailed notes for himself. We decide that language-independent annexes should use the three-letter codes to refer to items in the main body of the standard.

Next, we reviewed Larry Wagoner's draft of an annex for C, N0221. Larry also took notes for himself.

Action: Larry Wagoner volunteered to develop a version of the C annex where the mitigations are written in the form of rules rather than a discussion.
