Date: 18 Feb 95 _____

Proposal Category:

☒ Editorial change/non-normative contribution

☐ Correction

☐ New feature

☐ Addition to obsolescent feature list

☐ Addition to Future Directions

☐ Other (please specify) _____

Area of Standard Affected:

☐ Environment

☐ Language

☐ Preprocessor

☒ Library

☐ Macro/typedef/tag name

☐ Function

☐ Header

☐ Other (please specify) _____

Prior Art: _____

Target Audience: Developers who rely on calls to rand
delivering a sequences of numbers that are random

Related Documents (if any): Algorithm 183, Applied Statistics
1982, Vol 31, No 2

Proposal Attached: ☒ Yes ☐ No, but what's your interest?

Abstract: Making the world a better place to write software
in.

Proposal: Clause 7.10.2.2 contains example code for the rand
function. The random quality of the number sequences
generated by this code is poor. Replacing the example
by an alternative algorithm may lead to higher quality
of implementations.

The proposed algorithm is:

x = (171 * x) % 30269

y = (172 * y) % 30307

z = (170 * z) % 30323

rand_num = fmod(x/30269.0 + y/30307.0 + z/30323.0, 1.0)

The cycle length of this generator exceeds $2.78 * 10^{13}$.
At 1,000 calls per second the sequence would repeat after
880 years.

As well as a long sequence length this generator delivers numbers uniformly distributed between 0 and 1.

Actual implementation has to rewrite the first three assignment expressions to prevent overflow on the multiplication.

Proposal: Clause 7.10.2 contains example code for the rand
function. The random quality of the number sequences
generated by this code is poor. Replacing the example
by an alternative algorithm may lead to higher quality
of implementations.
The proposed algorithm is:
$$x = (171 * x) \wedge 30269$$
$$y = (171 * y) \wedge 30269$$
$$z = (170 * z) \wedge 30235$$
$$\text{rand_sum} = \text{fmod}(x \wedge 30269.0 + y \wedge 30269.0 + z \wedge 30235.0, 1.0)$$

The cycle length of this generator exceeds $2.38 * 10^{11}$.
At 1,000 calls per second the sequence would repeat after
880 years
